

Compass

若者たちの羅針盤となる存在を目指して

AIM TO BE THE COMPASS OF THE YOUTHS.

In a rapidly changing era, we will produce many youths who can imagine the future with their own compass to society.

Graphic design

Website examples

System examples

Website production and direction business

We build site that is for targeted audience and designed to meet the needs of customers. We also embed blogs in EC site upon request and also create smartphone sites.

We are always coding according to the trends of search engines to build a site with high SEO effect.

Web application development and server maintenance management

We offer various development services using HTML5, which is considered to be mainstream in web and application UI development. In addition to PC sites, we also provide original CMS that can be managed by multiple devices such as smartphones and tablet PCs.

Business management system development for SMEs

There are many companies that are hesitate to developing their own systems with complicated business content because they think it always requires a lot of money and time. However, there are many cases where there is a method that can be done with a small amount of money and a short period of time with one idea, or a complicated task can be simplified with a computer. At our company, an experienced IT consultant will visit you first and listen carefully to representatives and on-site staffs to understand your business flow. Based on the content of the interview, we will build functionality and original system that cannot be reproduced by existing ERP and ASP.

Application development for smartphones and tablets

We develop applications for both Apple and Andriod platforms. We have accumulated a series of know-how from planning to design, development, application and operation. In addition, we are developing closed applications for some users, such as those for business use and internal use, instead of being open to the public.

In-House development scenes

Outsourcing

We provide a wide range of solutions for infrastructure, development, and business support through transactions with various industries.

We have enthusiastic engineers that are mainly in 20-30s. On weekends, we hold study sessions tailored to individual goals to improve skills!
